ARCADE: FREE Racing Car

Hello, first of all, I want to let you know that you are able to use this model in commercial and non-commercial projects. No attribution is required. These are some important details of the asset:

- If you see strange reflections on the vehicles when importing this to your project, try to setup Window > Rendering > Environment Reflections > Intensity Multiplier = 0.
- The colliders and rigidbodies have default values; change them until you get the desired results.
- For mobile games, I recommend to disable realtime shadows, and use either baked or 'fake' shadows instead.

With nothing more to say at the moment, I appreciate your time by reading this file.

If you are interested in more vehicle models, I will share you a little description of other assets I have available on the Unity Asset Store.

Best regards, Mena.

ARCADE: MEGA Racing Cars Pack

An ever-growing cars pack with free monthly updates.
